

CMX512-2700C2

The CMX512-2700C2 is a 512 MByte, ultra-performance DDR SDRAM DIMM screened specifically for gaming applications. This part has been selected by our Compatibility Lab for its outstanding performance in motherboards commonly used in gaming rigs. Side-by-side comparison indicates that this is one of the fastest DDR modules available in the world.

FEATURES

- 512 Megabytes of memory
- Implemented using 32M x 8 DDR SDRAMs
- 100% tested at 166 MHz in high performance motherboards
- Integrated aluminum heat spreader for improved thermal performance
- Benchmarked over multiple chip sets, processors, and motherboards
- Legendary Corsair reliability and service
- Lifetime warranty

TEST SPECS

- Each module is tested in either Epox 8KHA+ or Asus P4S333 at 166 MHz
- Tested at CAS latency of two cycles (2-3-3), command rate of 1T (one module/system)
- SPD programmed at proposed JEDEC values for PC2700

The Fine Print: Newer motherboards may be used for production test as they become available. Corsair may periodically update the part with newer RAM revisions of same or greater performance. RAM used on the module may change without notice. © March, 2002, Corsair Memory, Inc.
