

CMX512-3200

The CMX512-3200 is a 512 MByte, two-bank, ultra-performance DDR SDRAM DIMM designed specifically for gaming applications. This part delivers outstanding performance at high clock speeds. It has been tested extensively in a variety of motherboards commonly used in gaming rigs. This memory has been verified to operate at DDR400 (200 MHz, 3-3-3-8). This module is also available in matched pairs of TwinX modules tested as a set in a dual channel DDR motherboard.

FEATURES

- ▶ 512 Megabytes of memory
- ▶ Implemented using 32M x 8 DDR SDRAMs
- ▶ Integrated aluminum heat spreader for improved thermal performance
- ▶ Benchmarked over multiple chip sets, processors, and motherboards
- ▶ Legendary Corsair reliability and service
- ▶ Lifetime warranty

TEST SPECS

- ▶ Each module is tested individually in either an Asus A7N8X or P4C800 motherboard at DDR400 (200 MHz)
- ▶ Tested at 3-3-3-8 latency settings
- ▶ SPD programmed at 3-3-3-8 latency values

The Fine Print: Newer motherboards may be used for production test as they become available. Corsair may periodically update the part with newer RAM revisions of same or greater performance. RAM used on the module may change without notice. © February 2004 Corsair Memory, Inc.
