

CMX512-3500C2

The CMX512-3500C2 is a 512 MByte, dual bank, ultra-performance DDR SDRAM DIMM screened specifically for gaming applications. This part has been selected by our Compatibility Lab for its outstanding performance in motherboards commonly used in gaming rigs. This memory has been verified to operate at 434MHz (2-3-3, 1T command rate). Generally, one 512 MByte module will outperform two 256 MByte modules in a given motherboard. Side-by-side comparison indicates that this is one of the fastest DDR modules available in the world.

FEATURES

- 512 Megabytes of memory
- Implemented using 32M x 8 DDR SDRAMs with 5.0 nanosecond access time
- 100% tested at 434 MHz in high performance KT400-based motherboards
- Integrated aluminum heat spreader for improved thermal performance
- Benchmarked over multiple chip sets, processors, and motherboards
- Legendary Corsair reliability and service
- Lifetime warranty

TEST SPECS

- Each module is tested in an Abit KD7 at 434 MHz
- Latency: 2-3-3-7-T1 (one module installed)
- SPD programmed at expected JEDEC values for PC3200

The Fine Print: Newer motherboards may be used for production test as they become available. Corsair may periodically update the part with newer RAM revisions of same or greater performance. RAM used on the module may change without notice. ©September, 2002, Corsair Memory, Inc.
