

# TWINX2048RE-3200

TwinX2048RE-3200 consists of a matched pair of CMX1024RE-3200 memory modules. This memory kit was specifically designed for motherboards supporting dual channels of registered PC3200, such as AMD Athlon™ 64 FX based platforms. It is ideal for high performance gaming and for graphics applications that require large memory arrays. It offers an unprecedented combination of high speed and high density. TwinX memory kits are designed to provide the ultimate in performance and stability in dual channel boards. These parts have been verified to operate at DDR400 (200 MHz at 3-3-3-8) in a dual-channel motherboard.

## MEMORY KIT FEATURES

- ▶ 2 Gigabytes of registered memory
  - ➔ *Two CMX1024RE-3200 memory DIMMs*
  - ➔ *Error Correction (ECC)*
- ▶ Dual channel testing environment
  - ➔ *200MHz Athlon 64 FX-based test setup*
- ▶ Legendary Corsair reliability and service
- ▶ Lifetime warranty

## Test Specs

- ▶ Tested and packaged in pairs
  - ➔ *Modules tested together in Asus SK8N-based test setup*
  - ➔ *Packaged together immediately following system test*
- ▶ Tested at 3-3-3-8 latency settings
- ▶ SPD programmed at 3-3-3-8 latency values

The Fine Print: Newer motherboards may be used for production test as they become available. Corsair may periodically update the part with newer RAM revisions of same or greater performance. RAM used on the module may change without notice. © January 2004 Corsair Memory, Inc.
